

• Reduced complexity from $O(2^n)$ to $O(1)$

• Behaviour has changed

• **It now always increases**

• Could wrap if called `std::numeric_limits<uint64_t>::max()` times

• 18446744073709551615 (18x10^18)

• That's quite a lot of tracks/clips/plugins

• Contract has stayed the same - returns a unique ID

• Checkered with a snake print

5

4

- Reduced complexity from $O(2n)$ to $O(1)$
- Behaviour has changed
 - ID now always increases
 - Could wrap if called `std::numeric_limits<uint64_t>::max()` times
 - 18446744073709551615 (18×10^{18})
 - That's quite a lot of tracks/clips/plugins
- Contract has stayed the same - returns a unique ID
 - Checked with an assertion

Techniques for Optimisation

4. Caching appropriate data
