

C++: safe cpp tool

• *Impose only the minimum restrictions and departures from traditional C + n*

• different representations and libraries

• *'spotool' is a command line tool to help enforce memory and data race subset of C++*

• *'Necessarily comes (modest) experience with flexibility or performance'*

• *Designed to work with the SdfeCPlusPlus library*

• Lint tools to check only "safe" code patterns/libraries are used

achievable/practical/performance/safety'
