

(Paraphrasing Tim)

Language Safety defined as UJB (in C++)

• ***A programming language is safe if it doesn't let you express undefended behaviour***

• Why not make all UBill-forms?

Performance

• Clickwords.compatibility

Complexity

• Expressivity

• Portability

19

Language Safety defined as UB (in C++)

(Paraphrasing Timur)

- ***A programming language is safe if it doesn't let you express undefined behaviour***

- Why not make all UB ill-formed?

- Performance
- Backwards compatibility
- Complexity
- Expressivity
- Portability
