

Look familiar? Swift **classes**

```
class Person
{
    private var first_name: String = "";
    private var last_name: String = "";

    func get_first_name() -> String
    {
        return first_name
    }

    mutating func set_first_name (new_first: String)
    {
        first_name = new_first;
    }

    // Repeat for last_name
}
```

```
class person(arc)
{
public:
    std::string get_first_name() const
    {
        return first_name;
    }

    void set_first_name (std::string_view new_first)
    {
        first_name = new_first;
    }

    // Repeat for last_name

private:
    std::string first_name, last_name;
};
```

Combined

```
class person(mutex, arc)
{
public:
    //...
```
