Obesity is defined as a BMI of 30 or greater. This is a simple and easy-to-use definition, but it is not perfect. BMI does not take into account muscle mass, and it does not take into account the distribution of fat in the body.

There are many different causes of obesity, but the most common ones are diet and lack of exercise. Eating too much food, especially food that is high in calories and fat, can lead to weight gain. Not getting enough exercise can also lead to weight gain.
