

**Measurement Metrics?**

• A piece of code executing many times

• Total, min/max, mean & variance/SD

• Total execution time is useful for “naïve” characteristics

Max is useful for “worst case” scenarios

• **Min informs of where you could be**

• Mean gives an “expected” indication

# Measurement Metrics?

- A piece of code executing many times
- Total, min/max, mean & variance/SD
- Total execution time is useful for “macro” characteristics
- Max is useful for “worst case” scenarios
- Min informs of where you could be
- Mean gives an “expected” indication

# What to Record?
