

```
template<typename T>
struct is sync : std::false type {};
template<typename T>
struct is sync<std::atomic<T>> : std::true type {};
template<typename T>
inline constexpr bool is sync v = is sync<T>::value;
template<typename... Args>
concept sync = (is sync<Args>::value && ...);
```

```
static assert(! is sync v<int>);
static assert(! is sync v<int&>);
static assert(! is sync v<const int&>);
static assert(! is sync v<std::string&>);
static assert(! is sync v<const std::string&>);
static_assert(is sync v<std::atomic<int>>);
```

## Sync in C++: Sharable between threads

```
template < typename T>
struct is_sync : std::false_type {};

template < typename T>
struct is_sync < std::atomic < T>> : std::true_type {};

template < typename T>
inline constexpr bool is_sync_v = is_sync < T>::value;

template < typename ... Args>
concept sync = (is_sync < Args>::value && ...);
```

```
static_assert(! is_sync_v<int>);
static_assert(! is_sync_v<int&>);
static_assert(! is_sync_v<const int&>);
static_assert(! is_sync_v<std::string&>);
static_assert(! is_sync_v<const std::string&>);
static_assert(! is_sync_v<std::atomic<int>>);
```

What types are sync?
